

How to Modify a Zone Alarm Pro Firewall

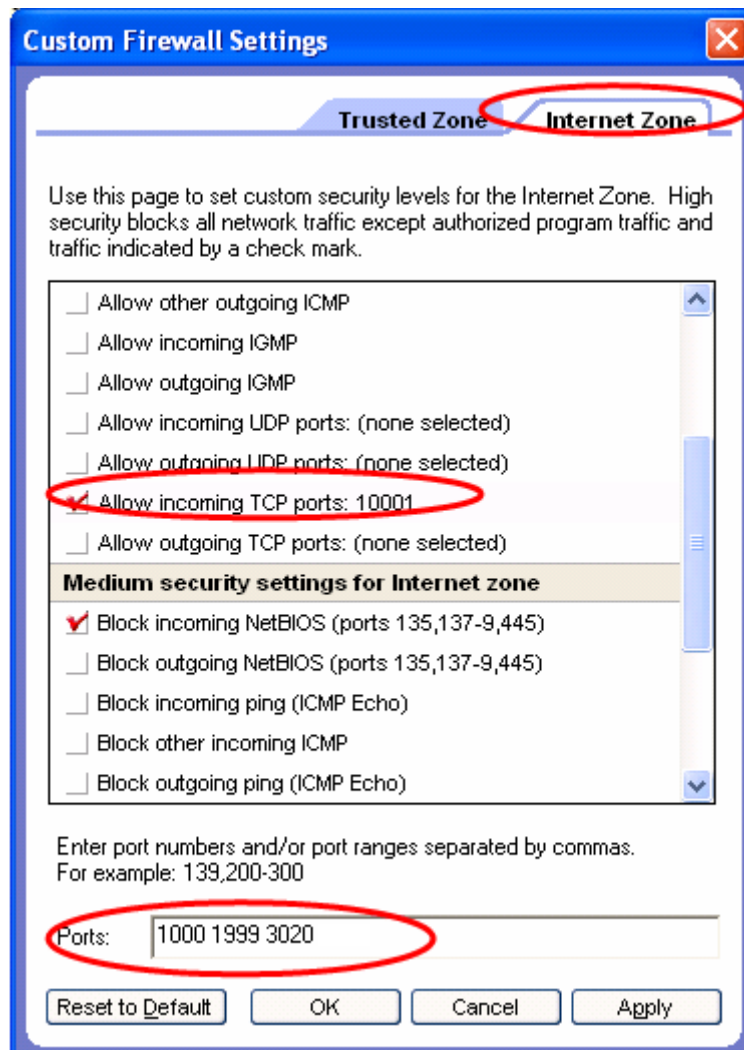

First, click on the Firewall tab.

Next, click on the Custom button.

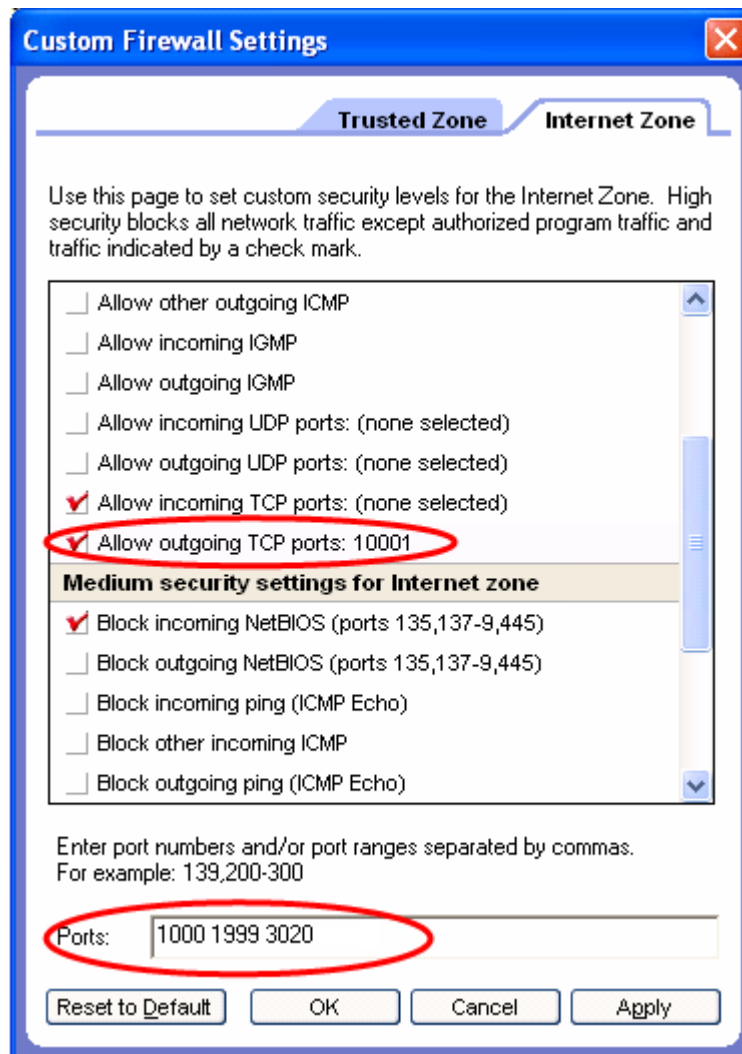

In the Internet Zone tab, check the box that states, "Allow incoming TCP ports:" In the text box at the bottom of the window, add the ports required for the ForexTrader platform. When adding multiple ports, use a space to separate.

Ports required for the ForexTrader platform are as follows:

Port Numbers	
Java Platform	HTML Platform
1999	900
3020	3020
1000	1000

Follow the same steps to add outgoing connections. In the Internet Zone tab, check the box that states, "Allow outgoing TCP ports:" In the text box at the bottom of the window, add the ports required for the ForexTrader platform. When adding multiple ports, use a space to separate the numbers.

When this is complete, click OK.
